

# BIOREACTOR SEMINAR

## EPA Region 6

**Description:** A bioreactor landfill operates to rapidly transform and degrade organic waste. The increase in waste degradation and stabilization is accomplished through the addition of liquid and air to enhance microbial processes. The overall objective of the bioreactor seminar is to decrease landfill volume and further reduce the need to construct new landfill sites.

**Goals:** The goals of this workshop are to:  
Educate individuals on bioreactor technology;  
Evaluate the advancing landfill technology; and  
Discuss the field studies and laboratory results that investigate effectiveness of mechanisms designed to degrade municipal waste.

**Invitees:** EPA invites all key landfill representatives, companies, vendors of bioreactors, local, regional State and federal levels, representatives, universities, professional organizations such as SWANA and ASTSWMO, applicable non-profit and grassroots environmental organizations, and public think-tanks addressing relevant issues to attend.

**Registration:** *To register for the seminar go to [www.trainex.org/BRS](http://www.trainex.org/BRS). A recycling and scrap tire Regulators Roundtable will be held simultaneously on September 25, 2008 at the Sheraton (Regulators only).*

The seminar will be at the Sheraton Austin Hotel (701 East 11th Street, Austin, TX) on September 24, 2008. To make hotel reservations go to:

<http://www.starwoodmeeting.com/Book/EPASEMINAR> or call -(888) 627-8349.

*Please contact Audray Lincoln ([lincoln.audray@epa.gov](mailto:lincoln.audray@epa.gov)), or call (214) 665-2239 for more information.*

*No Registration Fee!*
