

#### **4.2.4 Sampling Connecting Ssystems** (264.1055 and 265.1055)

Each sampling connection system must be equipped with a closed-purge, closed-loop, or a closed-vent system. The closed-purge, closed-loop, or closed-vent system must return the purged hazardous waste stream directly to the hazardous waste management process line with no detectable emissions, collect and recycle the purged hazardous waste stream with no detectable emissions to the atmosphere, or be designed and operated to capture and transport all the purged hazardous waste stream to a control device. Sampling connection systems with in-situ sampling are not required to be equipped with a closed-purge, closed-loop, or closed-vent system.
